To Whom It May Concern,

I have known Dr Martine Ceberio for several years. I have been under her instruction as an undergraduate and graduate student, and since about a year, also under her mentoring both as a research assistant and thesis advisee.

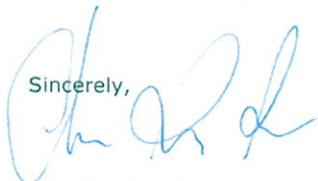

As an instructor, Dr Ceberio has always found ways to introduce complex concepts in such a transcendent way that makes it impossible to forget. Not to mention that her teaching style seeks not only to cover a given material but also to awaken an eager in us, her students, to find out more on our own.

As a research and thesis advisor, Dr Ceberio has not only mentored our research work at the lab, but also encouraged and supported us to get involved in other research activities such as participating in conferences, as well as collaborating with some of her colleagues at other educational institutions.

Under her supervision, I am currently working on the development of a constraint solver for our research group CR2G (Constraint Reading and Research Group), as well as mentoring a group of incoming students on projects related to constraint solving with a biology background, as part of the MSEIP program at EPCC. Thanks to Dr Ceberio, I also had the opportunity to participate in the NAFIPS '11 and COPROD 2.0 11 conferences, which were co-organized and organized by her respectively.

Should you require further details on the information provided, please feel free to contact me.

Sincerely,

Christian Del Hoyo

MS in CS student
