□ Teaching

□ Overview

During the almost 15 years I have spent at UTEP, I have taught one or two courses each semester. In addition, I have regularly taught independent studies, on top of my regular course load.

I have taught courses at the undergraduate level: including introductory courses (CS1, 2, & 3), theoretical (CS3350 Automata), practical (CS3360: Programming Languages), Artificial Intelligence, a few special topics in Constraint solving, Game development, as well as graduate courses: including core courses (e.g., CS5303 Logical Foundations of Computer Science, CS5350 Advanced Algorithms) and a few special topics in Intelligent Computing.

I have redesigned the Introduction to Computer Science course (CS1401, now CS1301/1101) in my department. I have created a Problem-Solving Club that welcomes undergraduate students once a week to practice problem solving and (when relevant) programming. I have designed a new course on Problem Solving, which I piloted in summer 2016 and reworked with the advise and support of

Google in spring and summer 2017: I taught the new course (numbered CS1190) twice in fall 2017 and it is scheduled to be taught again once or twice in spring 2018.

My teaching evaluations have consistently been between 4 and 5 out of 5.

Teaching innovation

Always seeking innovation in the classroom to increase student success, break the barrier of usual intimidation, engage all students, I have tried several approaches over the years, from using the old hotmail messenger back in the days (around 2003) to answer my students' questions in real time, to being an early adopter of piazza (piazza.com – 2010) to engage students through active participation and to still allow one to one mentoring, to adopting the use of online textbooks and labs (zybooks.com – 2015 – including zylabs – 2016), online quizzes and online quick feedback system Socrative (socrative.com – 2016). I plan to use iClicker in spring 2018. I am also looking at tools such as gradescore and mimir, to address our growing enrollment with tools that we aim to allow us (faculty) to provide the same level of feedback and communication to each student.

I have also regularly sought professional development (see below) and integrated what I learned in my classes: cooperative learning and problem-based teaching, flipped classroom, competency-based assessment and motivation-based teaching. From my latest training on large-class management, I am currently working on establishing peer mentoring for our CS0 students through the Miner Learning center PASS program at UTEP.
